

POS Marketing Package

The following screens are examples of how the customer display might look at various steps during a checkout process and serve as best practice recommendations.

QR code scan form customer display after cashier process

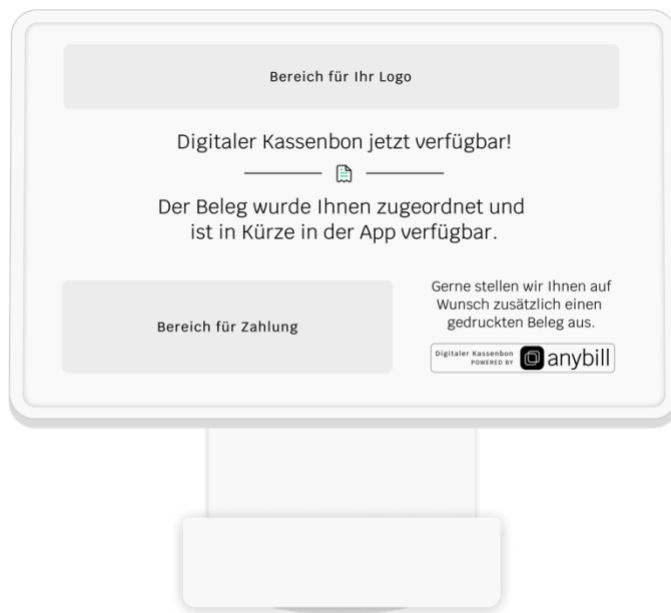

- Customers scan the QR code after scanning and payment process and **before** completing the checkout process.
- He will be redirected to the receipt website where he can download and view the receipt.

QR code scan from customer display during cashier process

- This option is **optional** and enables a faster checkout process.
- Customers can scan QR code already during checkout process.
- He will be redirected to the receipt website, where he will be informed that the receipt will be available after the cashier process is completed.

Receipt retention with payment method/customer card or external ID

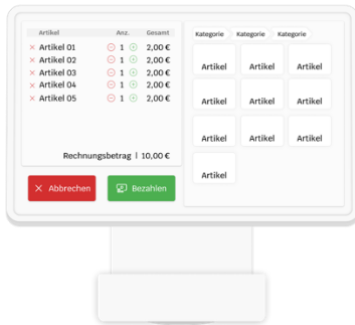

- A QR code does **NOT** have to be displayed because the receipt could already be directly assigned to a user by means of payment, customer card or external ID.
- If a QR Code was already displayed during the cashier process, it loses its validity.
